

Summit Pediatrics And Adolescent Medicine

IS YOUR PATIENT CENTERED MEDICAL HOME!

What is a Medical Home?

A Medical home is all about you and your child. Coordinating and following all medical aspects of the care needed is the most important job we will do as your Medical Home. It involves building a relationship in which we know you and your family situation, your medical history, and any health issues or concerns. In turn, you come to trust and rely on us for expert, evidence-based health care answers and coordination.

What is your part as a parent?

You know your child best and are the most important role in your child's healthcare team. As part of your child's medical home, you should learn about your child's health. Bring all copies of any medical records that the child has had outside of our office. Follow the recommended well child visit schedule, making sure your child is seen at least once a year by their provider. Keep track of your child's immunizations and any other important information. Follow the recommended orders, studies, or consults for your child, as they will help us with their complete care. Ask questions if we are not clear, because we are here to help you!

What is our part as the Medical Home?

As your primary provider, we will lead the team of health care professionals that collectively take responsibility for all forms of your child's care. We will get to know you and your child and suggest treatments that make sense for your family. Keep a complete chart of your child's medical history including coordinating all notes from outside providers. Help you with obtaining appointments and giving you information for specialists, referrals, and all other resources. Help you handle your child's chronic conditions. Be available so you can bring your child in for acute sick visits the same day or the very next day. Have a nurse available by phone 24/7 for your convenience.
